Subject: AUT External Project: AWS Lambda Serverless CMS

Dear James Burton,

My name is Adam Campbell, I am the team leader for Group 18 currently undertaking the Research and Development project at AUT University.

Our group has been awarded the opportunity to work with Cloud House in undertaking the AWS Lambda Serverless CMS project this year, and would thoroughly enjoy meeting with yourself and the team at Cloud House.

We have been given a brief description regarding said project from the University, however we do require an opportunity to meet to discuss the project in greater detail. Our current goal at this point in time is to generate a project proposal based on information we can elicit from yourself and the Cloud House team.

Is there any possibility of organising a meeting for this coming Monday (7th), our group has an afternoon lecture that day at 4pm, however any time prior to that would be exceptional. The University has allocated the time prior to said lecture to facilitate meetings with clients, so Monday mornings are an excellent time.

If this time doesn't suit you, we are happy to be flexible around the hours that work best for yourself.

If possible, are you able to provide me with some rough samples/examples of what you envision the end product resembling, as the team and I wish to prepare as many appropriate questions as possible.

Additionally, our supervisor Waqar Hussain will be in attendance for the first meeting, and has informed us that Monday morning would work well for him.

Kindest Regards,
Adam Campbell
Group 18

Initial Meeting Reflection

Adam Campbell

to james@cloud.house, Waqar, Chris, John, Miguel

Mar 10

Hi James,

Thank you for meeting us yesterday, and hosting the meeting at Cloud House, the new location gives us some good exercise walking up Queen Streets steep hill.

I just thought I would email you a small reflection based on yesterdays meeting between Cloud House and ourselves.

- Both teams met, and introduced a bit about themselves
- A brief discussion of the project has taken place
 - Open Source
 - Utilizes AWS Lambda services
 - Back-end only implementation (something we would like to discuss further at a next meeting)
 - Hosted on GitHub
 - Flexible on features (input from Cloud House and ourselves)
 - Some assistance from Cloud House, but ultimately our responsibility
 -
- Training for AWS Lambda for the team
- Project proposal is our current goal (final draft produced by Friday 18th the latest)

- Future weekly meetings to take place (Monday mornings preferred)

The team and I are currently beginning the proposal draft with the information gained from yesterday's meeting, and will most likely have more questions about proposal content. Part of the proposal includes a Gantt chart, which is currently being produced, however we will need some milestones from yourself so we can meet your expectations for this project.

I understand yesterday you did mention you will get back to us regarding a time for a meeting on Monday, I believe you wanted to discuss the project further to work out the direction for the project, and bounce around some ideas. If you can let us know when a suitable time is for you, and if you are able to host us again, or would prefer to come to us.

The team and I did have one question for you regarding presenting ourselves. Yesterday we dressed formal as we were not sure of the expected appearance at Cloud House, however the atmosphere feels relaxed and casual, whilst maintaining professionalism, is it suitable for the team and I to wear clothing such as T-shirts/shorts and the like, or should we maintain our formal appearance going forward?

Kindest Regards,

Adam Campbell

Mar 13

Hey guys,

T shirts are fine. We are very informal. Just be showered and fresh ☐.

How about tomorrow at ten thirty you come by the office and we start creating your milestones. Break for lunch at twelve, then do another hour or two figuring out how much you guys need to learn about AWS and the best ways to get you up to speed.

Cheers,

James

Mar 13

Hi James,

Sounds like a plan. The team and I will meet up at 10 and will head over.

Just a side note, the team and I have come to an agreement of changing over the role of Team Leader to Miguel, who is one of my fellow team members. He will be your future communications from the team.

This decision came about due to personal reasons of mine, for which I didn't want to cause any impedece to the team progress, therefore I have passed on

the role to Miguel and will assist him in his role as required. We can discuss this briefly tomorrow.

See you at 10:30.

Kindest Regards,

Adam Campbell

May 16

Hey Miguel,

Send your first sprint review to me via email. Just make it a report. Sorry not in country to see you in person. Don't bother coming into the office.

James

May 16

Hey James,

Hope you are having a good time soaking up the sunny Fiji rays.

Here is our progress report for Sprint 1

https://docs.google.com/document/d/1_eDFbmPr6NzZ3cRnNU-FMY0n14XSRXVL0JUkrq8rTsl/edit?usp=sharing

We are planning for next sprint to create the security model outlined in the report document. This is our top priority at this point in time, with lack of guidance we do not see any other way of implementing the authentication layer. We are also will be consulting your Dev Ops team on Slack about the feasibility of this model. We look forward to hearing your opinion on and our security model and if there is anything vague please enquire.

p.s. Is it possible to find out when you will be back in Auckland?

Thanks

Security Model Advice

me

to toni, julius

May 16

Hey guys,

I am Miguel Saavedra from the AWS Lambda CMS development team. We would like to enquire about your opinions about the security model we have thought of out lined in the below document. We Decided on this model since Cognito doesn't distinguish our users.

https://drive.google.com/open?id=1_eDFbmPr6NzZ3cRnNU-FMY0n14XSRXVL0JUkrq8rTsl

We look forward to your experienced input on our model.

Thanks
