# Sprint 2 Sign-off

Team Kitsui

Tasks Completed

- As an administrator, I must be able to logout from the CMS, so that nobody can access administrative actions.
- As a developer, I need to create a setup bash script for the user table, so that I can automate creation of the table.
- As a developer, I need to create a setup bash script for token table, so that I can automate creation of the table.
- As an administrator, I must be able add users to the CMS, so that they can perform actions.
- As a developer, I need to create a setup bash script for creating a lambda function so that I can automate creation of the function.
- As a developer, I need to create a setup bash script for creating an api gateway so that I can automate creation of the api gateway.
- As a developer, I need to research how to return a JSON object to the requesting web page, so that I can return authentication data.
- As a developer, I need to research AWS Web API Gateway, so that I can produce Gateways for the CMS.
- As a developer, I need to research Hashing/Salting of passwords, so that user passwords are secure.
- As a developer, I need to create a setup bash script for adding an admin user so that the admin can login.
- As a developer, I need to research cookie implementation in NodeJS, so that I can create cookies for authentication.
